Information Retrieval Outcomes

	Relevant	Not Relevant	Total
Retrieved	A = Number of retrieved and relevant	B = Number of retrieved and not relevant	A + B = Total Number of records retrieved
Not Retrieved	C = Number of not retrieved and relevant	D = Number of not retrieved and not relevant	C + D = Total Number of records not retrieved
Total	A + C = Number of Relevant	B + D = Number of records not relevant	A+B+C+D = Number of Total

Retrieval Contingency Table

Recall Ratio: A No. of relevant items retrieved/A+C Total number of relevant items in database

Precision ratio: A No. of relevant items retrieved/A+B Total number of items retrieved

Fallout: Proportion of unwanted records retrieved B/B+D

Omission: Proportion of relevant records not retrieved C/A+C

Noise: Complement of precision B/A+B

Specificity: Ability of system to reject unwanted records D/B+D

Sampling used to estimate the total number of relevant items

Relevance (challenges - pertinence/subjective)

(Outside of scope is user analysis)

Catherine McIntyre

Community Service Directory Manager

We're based on the lands of the Kaurna people, the traditional custodians of the land, waters and knowledge for this place, where we gather to collaborate and strengthen communities. In our work, we recognise the importance of Country – not just as a place, but how it also maintains community, family, kin, lore and language.

We pay our respects to Elders past and present. This always was, always will be Aboriginal land.

We support the Uluru Statement from the Heart
